BUILD YOUR OWN BRAINWAVES?

Math

Implementation

“Dynamical systems are fun!”

–Me

Math

{ + - * }

$\{ + - * \}$

&

$$E(x)$$

Our 1st function.

(A differential equation)

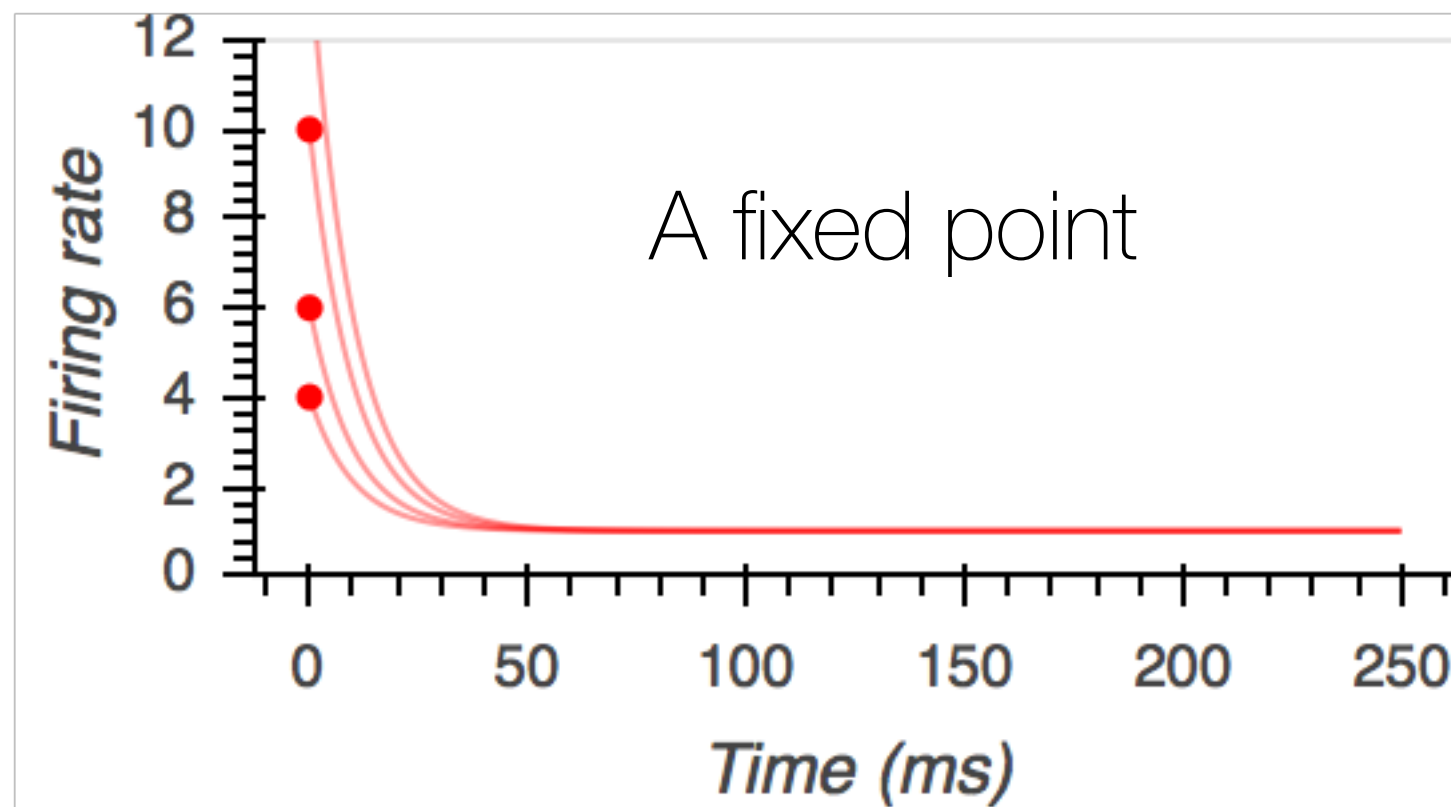

E

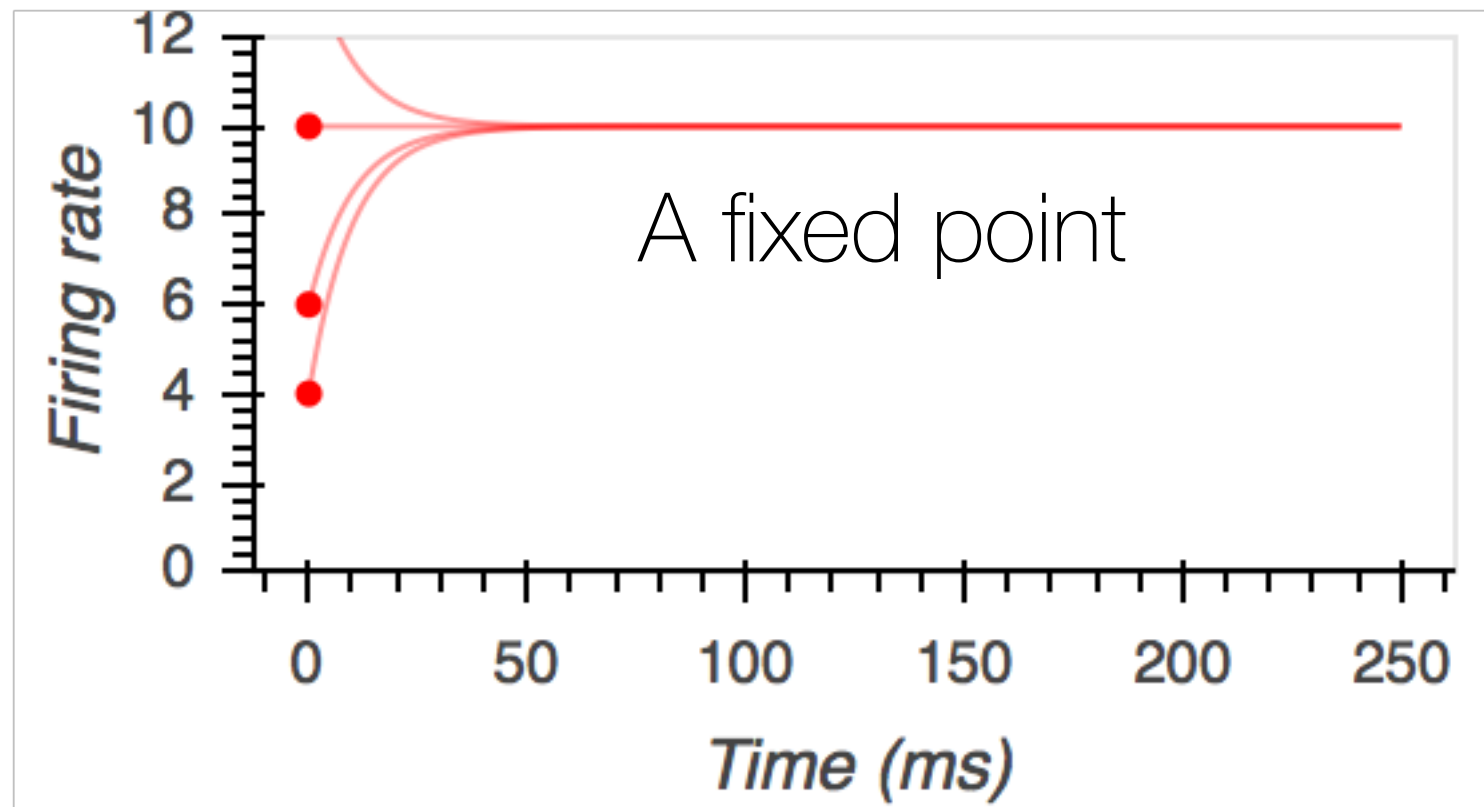

E

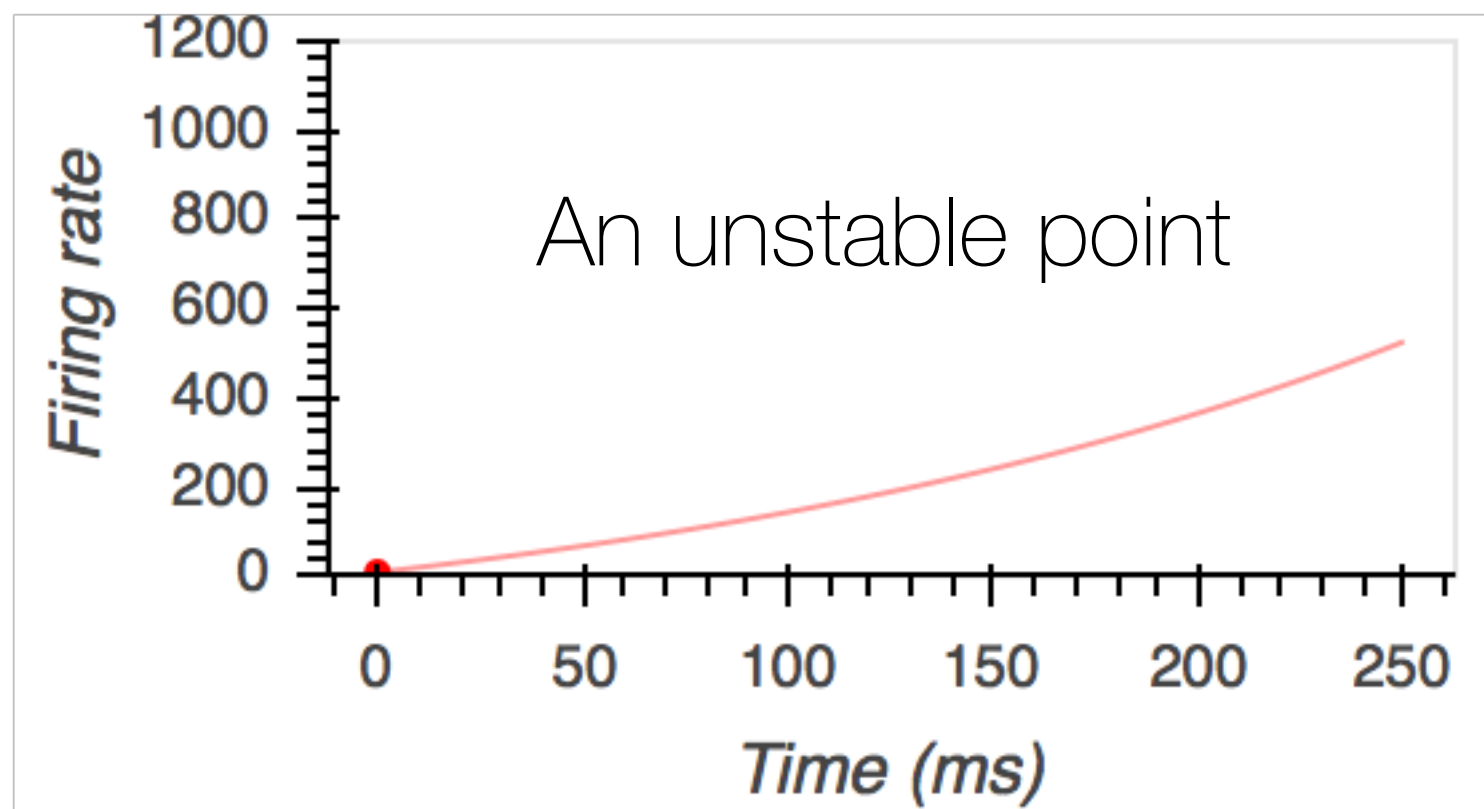

$$J_{ie} = 0.7$$

$$J_{ie} = 0.9$$

$$J_{ie} = 0.7 - 0.9$$

Bifurcation

$$J_{ie} = 0.7 - 0.9$$

$$J_{ie} = 0.7, J_{ei} = 0.1$$

$$J_{ie} = 0.7, J_{ei} = 0.3$$

$$J_{ie} = 0.5, J_{ei} = 1.0$$

$$J_{ie} = 0.5, J_{ei} = 1.0$$

Damped oscillator

$$J_{ie} = 0.4, J_{ei} = 1.0$$

$$J_{ie} = 0.4, J_{ei} = 1.0$$

Oscillation!

How many ways to make a

?

$$J_{ee} = 0.3 - 0.4$$

$$J_{ie} = 0.3 - 0.7$$

$$J_{ei} = 0.5 - 1.2$$

(Stable, Unstable, & Waves)

EIGENVALUES!

λ

EIGENVALUES . . .

What The F***!!?!?!?

What The F^{***} ;

...a set of values of a parameter for which a differential equation has a nonzero solution (an eigenfunction) under given conditions.

$$E = 0$$

$$I = 0$$

Linearize
→

Matrix form

	E	I
E	$(J_{ee} - 1) / \tau_e$	J_{ei} / τ_e
I	J_{ie} / τ_i	$(J_{ii} - 1) / \tau_i$

Dayan P & Abbott LF, Theoretical Neuroscience, MIT Press, 2005, p266.

	E	I
E	$(J_{ee} - 1) / \tau_e$	J_{ei} / τ_e
I	J_{ie} / τ_i	$(J_{ii} - 1) / \tau_i$

$$\lambda = 0.5 \left(\frac{J_{ee} - 1}{\tau_e} + \frac{J_{ii} - 1}{\tau_i} \pm \sqrt{\left(\frac{J_{ee} - 1}{\tau_e} - \frac{J_{ii} - 1}{\tau_i} \right)^2 + \frac{4J_{ei}J_{ie}}{\tau_i\tau_e}} \right)$$

$$i = \sqrt{-1}$$

ONLY THREE THINGS MATTER

1.

$$\lambda = 0.5((\dots) \pm \sqrt{-1?})$$

2.

$$\lambda > 0$$

3.

$$\lambda < 0$$

$$\lambda \neq i$$
$$\lambda < 0$$

$$\lambda \neq i$$
$$\lambda > 0$$

$$\lambda = i$$

$$\lambda < 0$$

$$\lambda = i$$

$$\lambda > 0$$

λ

$\lambda =$

EIGEN-

A BRAINWAVE RECIPE:

- At least two cells,
- reciprocally connected.
- One imaginary eigenvalue.

- Neuroscience
- Data science
- Statistics
- Programming
